

FOCUSING ON SUCCESS TOGETHER. THAT IS OUR PASSION.

We would like to ask you something. You are planning to buy a new bicycle – but for what purpose actually? Are you looking for a practical, sensible and sustainable alternative to a car in the city? Do you want to expand your freedom to move and spend your free time in an active and healthy way? Or are you an aspiring racer who wants nothing more than to effortlessly leave the competition behind? Whatever your goal is, whether on or off the road: we have the right solution! For the 2016 season, MERIDA is offering a wider variety than ever before. Entirely new models lay a solid claim to suiting your goals perfectly, just as countless revisions ensure that old friends are back again with more zest than ever.

At the same time, our models all have something in common for 2016: whether mountain bikes or hybrid bikes, road bikes or children's bikes, with or without an electric motor, whether beginners' or pros' variants – every bike was developed with the aim of helping you to optimally put your personal plans into action. This is the original meaning of "Me-Ri-Da" after all: the aspiration to develop fine, valuable bicycles which bring everyone as comfortably as possible to their individual destination – both in the narrower and broader sense. At MERIDA, we stand for a brand which has done more than offering quality bicycles in 77 countries around the world since 1988. MERIDA is also synonymous with athletic success on a world-class level. We construct bicycles on which world champions win titles and Olympic champions take medals. We triumph in World Cup races and cross the finish line first at stages of the Tour de France.

What does that mean for you? That we love success! And that's why we develop each bicycle to be the best of its kind. No matter what you want your experience with it to be. You can always rely on our passion for success.

MORE PASSION. MORE BIKE.

All of us at MERIDA share a great passion: we enjoy life on a bike! Therefore, for more than 25 years MERIDA has been developing and producing reliable, innovative and technologically outstanding bicycles, all of which together are devoted to one major task: to turn our joint passion into your enjoyment of cycling!

For the new model year 2016, our designers and engineers have reinterpreted our "classics" and have also developed innovations that redefine the standards of their category and cause not only experienced racers to rethink. But whether it be a mountain bike or a road bike, a youth bike or a women's bike, motorized or not, in 2016 each MERIDA again contains what has essentially driven us for years: MORE PASSION. MORE BIKE.

FULL SUSPENSION

NINETY-SIX CROSS COUNTRY / MARATHON

Legends don't just return, they come home! Like the brand new NINETY-SIX, the innovative reinterpretation of one of the most successful full-suspension racers of all time. Optimized in kinematic perfection for the 1x11 drivetrains that dominate the racing circuit, as well as extra-light and hungry for speed. Presenting the new working tool for the pros of our MULTIVAN MERIDA BIKING TEAM! Available in 29er and 27.5" versions. **from page 20**

ONE-TWENTY TRAIL

In 2015, our new "120-millimeter-plus" full-suspension shook up the singletrails of the world. With the complete revision of our classic trail bike it brought a great deal of new playfulness into the full-suspension line-up of MERIDA. For 2016, this capable ride has gone on a little diet and shines with a new carbon main frame as well as further innovative details. New for 2016: available in 29er and 27.5" versions. **from page 26**

ONE-FORTY ALL MOUNTAIN

The powerful AM full-suspension bike from MERIDA that takes full account of your individual riding style! Geometrically and kinematically tailored in optimal fashion to top-modern 27.5" wheels, the current ONE-FORTY is available either as a lively trail-oriented bike or in an even more aggressive build – you can make the best choice for your riding style! **from page 34**

ONE-SIXTY ENDURO

The bike for those who are not afraid of taking every downhill head on and who truly appreciate a wide "adrenaline-induced" grin on their face at the end of a riding day! Based on confidently rolling 27.5" wheels, each model variant of the ONE-SIXTY offers everything a modern enduro needs: markedly downhill-optimized geometry, reliable specs and a playful, plus a fun oriented short but wide cockpit. **from page 38**

HARDTAILS

BIG.NINE 29ER HARDTAILS

29er hardtails are effectively the "new standard" when it comes to XC. Not just the pros of our MULTIVAN MERIDA BIKING TEAM rely on the outstanding advantages of the powerful carbon variants of the BIG.NINE. Sports enthusiasts and casual cyclists also benefit from the advantages of large wheels: a BIG.NINE deals with all situations with sovereignty, thus providing comfort, high traction and confidence for its rider. **from page 44**

BIG.SEVEN 27.5" HARDTAILS

The now permanently established wheel size of 27.5" has quickly developed into far more than the "happy medium" of hardtail biking. The advantages: a fully convincing mix of increased traction compared to 26", but similarly agile. In this way, the 27.5" BIG.SEVEN combines everything modern hardtail fans look for: efficiency, traction, comfort and simplicity. In the case of the BIG.SEVEN, optionally with a highly sporty heart made of carbon fiber or aluminum. **from page 56**

MATTS 26" HARDTAILS

They are and remain the foundation of offroad biking. 26-inch hardtails have proven themselves a million times over, and therefore in the future they will still be a major gateway to the world of mountain biking for new ones to the sport, young people, price-conscious everyday riders and also those who like to keep their cycling versatile and casual. **from page 68**

WOMEN

JULIET WOMEN'S HARDTAILS

Each person is unique. We are made up of countless parameters that are impossible to reproduce in a bicycle. However, the requirements of a female rider, which differ from those of men in some aspects, can be implemented perfectly. MERIDA calls this principle JULIET and above all due to the new frame for 2016 it takes into account geometrical peculiarities that increase cycling fun significantly for HER. **from page 76**

YOUTH & KIDS

MATTS J JUNIOR HARDTAILS

Ride like the adults, from the first meter onwards! We at MERIDA are not only cycling enthusiasts, but as parents we also know what is important when our children get to know the fascinating two-wheeled world. Quality, reliability and the safe feeling that with a MATTS J your kids are guaranteed to ride a sporty, purpose-built and cleverly constructed bike – that at the same delivers loads of fun. **from page 84**

ROAD & FITNESS

SCULTURA ROAD RACE

Since the SCULTURA enriched our portfolio of high-end road bikes for the first time, this purebred has stood for both impressive efficiency and comfort. In 2016, a brand-new SCULTURA will introduce a new era that will redefine the standards of the classic road bike category. We have optimized our "sculpture" in the wind tunnel for the first time, and it achieves values that are almost equal to those of an aero racer. Combined with its traditional virtues, this produces a SCULTURA that is undoubtedly one of the best road bikes in the world. **from page 98**

REACTO ROAD RACE

The road bike from MERIDA that has its own slipstream. Born from the demand of the professionals of our LAMPRE-MERIDA TEAM for the perfect solution for instance for solo rides, we have created a modern road bike that is closely related to the time trial weapon WARP TT. In addition to its racing genes, it is also highly suitable for everyday use. **from page 108**

RIDE ROAD COMFORT

Our specialist for epic challenges that take a little longer: whenever you want to reduce the physical load in the saddle in order to enjoy extended rides or compensate for suboptimal surfaces, it is time for our RIDE. However, as a working tool of our TEAM LAMPRE-MERIDA, our most comfortable racer is also fully designed for speed. **from page 116**

WARP TT/TRIATHLON

The more specific the requirements regarding performance, the more specific the tasks that a perfectly suitable competition tool must perform. Therefore, a very important aspect of this category for MERIDA is that there must be no compromises! Whether as a "TT" version for individual and team time trials or as an independent "TRI" solution outside strict UCI specifications, the WARP is always the crucial second faster! **from page 128**

SPEEDER FITNESS

For all MERIDA fans who decisively opt against drop handlebars but do not want to miss out on the speediness of narrow tires. SPEEDERS are road bikes at heart but with significantly increased suitability for everyday use. Whether to commute to the office, a quick evening spin or to be the first to arrive at your destination on a weekend outing: speed counts! **from page 134**

CYCLO CROSS CX

Born as a winter training tool for ambitious road racers, in the course of their evolution cyclo cross bikes have developed into genuine multitaskers. Whether they continue to be a "bad weather alternative" for road bikers, a commuter solution for quickly getting to the office or – new for 2016 – a purebred sports tool with a pro level carbon-fiber frame, MERIDA's interpretation of CX is first and foremost diverse. **from page 140**

TREKKING & CITY

CROSSWAY TREKKING

The CROSSWAY family has always been synonymous with perfect all-rounders with broad potential. Thanks to a light aluminum frame that is robust and fully suitable for everyday use, low-resistance tires that nevertheless always offer reliable grip and a suspension fork for comfort and safety, a CROSSWAY never needs to ask for directions. The MERIDA CROSSWAY model line is for all who want to ride wherever it suits them. **from page 144**

CROSSWAY URBAN CITY

"Yesterday" – one word with major significance. Nothing less than the memory of the past, perhaps good times. Anyone who rides a brand new CROSSWAY URBAN and finds out firsthand how brilliant the combination of yesterday and tomorrow feels will certainly look back at a good time. **from page 156**

NINETY-SIX

CROSS COUNTRY/MARATHON

The air at the top is thin. Whenever elite professionals compete in their sport, they rightfully request perfectly thought-out sports equipment – for with each disadvantage, even minor ones, they are punished with defeat, both in terms of sport and material. It is therefore not surprising that four years after it made way for its successor NINETY-NINE, the “original” NINETY-SIX, one of the most successful full-suspension racers of all time, is still surrounded by an aura of victory today. And it is therefore likewise no surprise that we ourselves could barely wait to relight this fire and celebrate the rebirth of a legend for model year 2016. Welcome home, NINETY-SIX!

With the brand new NINETY-SIX, a new bike is available for 2016 that at first glance may appear quite similar to its predecessor that gave it its name. But when one takes a closer look, particularly at how the bike performs from the first meters, a cross country racer reveals itself that went through a thorough maturation process as well as on the drawing boards of its developers as on the trail. The most notable feature of this new weapon is its classic full-suspension racer layout: designed as a single pivot with linkage and the shock under the top tube, it is not just a coincidence that the new NINETY-SIX is reminiscent of the old one. The advantages of this design are obvious: no other layout can be realized in a more weight-optimized fashion, nowhere else is the shock actuated more directly, and only this position optimizes the function of the lockout. Not that the kinematics of the NINETY-SIX would work drivetrain-

neutrally only with a lockout, they were designed for maximum efficiency. Nevertheless, experienced riders rightly appreciate this feature.

Speaking of “kinematics”, the transition from NINETY-SIX to NINETY-NINE in 2012 originally was necessary because professionals had turned their backs on the common 3x10 drivetrains, for which the old NINETY-SIX was optimized, and switched to 2x10. But times have changed in this respect again. 1x11 is now preferred by XC racers and is also widespread among marathon riders. We have optimized the newly developed NINETY-SIX precisely toward this development. Thanks to MERIDA’s own “M.O.R.E.” technology, this is the case in all frame sizes and both optional 29er and 27.5” wheel sizes. The latter even features 119-millimeters instead of 96 millimeters of travel at the rear, while both rear ends shine with equal power transfer and efficiency.

AN OVERVIEW OF THE HIGHLIGHTS

The reinterpretation of one of the most successful full-suspension racers of all time. With modern kinematics, two available wheel sizes and excellent specs, it is driven by the successes of its famous predecessor.

- + Top level frame under 2 kg weight
- + New internal cable routing (Di2-ready)
- + Available as a 29er and 27.5"
- + Carbon, hybrid and aluminum models
- + Kinematics optimized for 1x11 drivetrains
- + Optimal remote lockout control

But there is more to the new NINETY-SIX than its classic full-suspension racer layout and the two available wheel sizes. It surprises with further only supposedly inconspicuous details. For instance, shifting cables and brake hoses are routed inside the frame, and rattling is effectively prevented by securely clamped entrances and exits, which are of course Di2-ready! Of particular interest to riders who use the NINETY-SIX not as a racing weapon but a high-speed full-suspension bike outside closed-off routes is that the cable of a "stealth type" dropper post can also be routed elegantly inside the frame. Meanwhile, thanks to our own "Down Tube Exit" technology, all cables remain easily accessible for maintenance.

However, a look at its geometry shows that the newcomer is nothing less than the worthy successor to the "original" NINETY-SIX, which was hugely successful in professional circles. With a short wheel base and also a short top tube, our engineers have achieved a similar reach and thus comparable characteristics – at an even higher level and thus with the best foundations for winning the podiums of this world!

"In close coordination with the professionals of our MULTIVAN MERIDA BIKING TEAM, we elevated the new NINETY-SIX to a tremendous level. It is certainly something very special to resurrect this legend!"

JÜRGEN FALKE, Director of Products

SCULTURA

ROAD RACE

Bike engineers are like top athletes: they are constantly driven by the will to achieve a new performance high. And like in any other sport, for the development of a new top bike it can be said that the better the "old" project was, the thinner the air becomes. With the SCULTURA, a high-end carbon racer has been part of the MERIDA portfolio since 2006 that has set the bar of modern requirements of a road bike extremely high, particularly in its third evolutionary phase. Superb stiffness for quick acceleration and highest steering precision met outstanding saddle comfort, allowed any task, no matter how long it lasted, to be accomplished with flying colors.

However, as an innovative brand it is precisely this aim that drives the MERIDA engineering department on: the pursuit of the next step. So it is not without pride that we are able to present for model year 2016 the SCULTURA 4, which manages to outshine its predecessor once again.

The bare figures alone of this new working tool of our UCI WorldTour TEAM LAMPRE-MERIDA are impressive: 740 grams frame weight*, less than 1,000 grams for the set including our newly developed fork! The basis for these new dimensions is a new carbon production process, which MERIDA is now focusing on for the first time. A synthetic positive core, specially produced for all frame sizes, allows for the optimized arrangement as well as the use of less material when the individual carbon mats are put together manually – the result: less weight and more performance.

However, this new evolution with its radical diet has of course not forfeited all the impressive qualities for which the previous SCULTURAs have been known – on the contrary! The now wedge-shaped down tube shows our flow-optimized "NACA Fastback" tube profiles, borrowed for example from the WARP TT, and it has an extra-wide connection to the Press-fit-386 bottom bracket for increased power transfer. The head tube too, which was trimmed down to fit a tapered 1 1/8 to 1 1/4 fork for optimized airflow, is markedly stiffer for superior tracking even at the highest speeds.

"Speed" itself was the top topic throughout the development of the new SCULTURA range. With aerodynamics not yet in the engineers focus for the models up to 2015, extensive wind tunnel sessions became a requirement for the newcomer.

In addition to the partially optimized tube

* in frame size S/M

AN OVERVIEW OF THE HIGHLIGHTS

Less than 1,000 grams! The new SCULTURA* competes in the league for the world's lightest serially produced bicycles and thus creates an outstanding combination of excellent weight, top aerodynamics and comfort.

- + Frame weight: 740 g*
- + Frame set with new fork: 985 g*
- + Internal cable routing fully "Di2-ready"
- + Suitable for tires of up to 25 mm in width
- + Agile due to 400-mm chain stays
- + Direct mount rear brake

shapes, it is apparent "minor details" that ensure that the improved aero-performance of the new SCULTURA moves considerably closer to that of the explicit aero racer REACTO. For instance, the internal cable routing of the drivetrain and the brakes was optimized. The rear brake was even relocated to the bottom bracket area. In addition to airflow optimization, this comes with a highly pleasant "side effect": the omission of the little bridge connecting the seat stays enables higher horizontal flexibility and thus even higher saddle comfort.

Speaking of "comfort", while 23-millimeter tires – mainly used in racing circles up to now – were still used for the SCULTURA up to model year 2015, the new version uses 25 millimeter-wide tires, thus underlining its aspirations toward the road bike world of tomorrow. However, our engineers did not have to sacrifice the markedly short chain stays of just 400 millimeters length for maximum agility and sharp handling – a further indication of our R&D department's aim for technical perfection. Ultra-light, extremely comfortable, faster than ever: life is getting lighter. SCULTURA 2016!

"Taking all its fantastic capabilities into account, the new SCULTURA is without doubt the finest road bike we have ever made. This is evident upon the first turn of the cranks, and not just for professionals."

DANIEL SCHWENK, Senior R&D Manager

ONE-TWENTY CARBON

Things that are allowed to develop gradually are often sure to have greater potential to become something special than projects that are finalized all too quickly. The new ONE-TWENTY is truly capable of confirming that. Pepped up from the classic 26-inch model to a trail-optimized 27.5" bike and topped off with innovative details for the 2015 season, model year 2016 will bring further exciting developments in the MERIDA trail segment.

For the ONE-TWENTY, the principal shining highlight is a new carbon main frame, which will complement the previous aluminum versions with high-end hybrid variants. The carbon fiber versions save approximately 400 grams*. Their rear end continues to be of aluminum, as the potential savings in weight to be achieved here do not offset the higher robustness of the tried-and-tested solution. Moreover, the new generation of the 120-millimeter full-suspension bike – in addition to the brand new NINETY-SIX – is one of two bikes in the 2016 program with double availability as a 27.5" and 29er version. Hence, sizes M and L are available with both wheel sizes; only S is available only with 27.5" and XL just as 29ers. The ONE-TWENTY's further-optimized internal routing of all cables is technically outstanding; it prevents any unwanted movement and rattling of the cables when the suspension is working.

* in frame size M

AN OVERVIEW OF THE HIGHLIGHTS

- + Approx. 400 g lighter carbon main frame
- + 27.5" and 29er versions
- + Endurance or trail oriented models
- + Accordingly fitted specs
- + Further-optimized internal cable routing
- + Tubeless-optimized wheel solutions

CYCLO CROSS CARBON

After a short dramatic pause, the carbon-fiber version of our extensive CYCLO CROSS family returns! Redeveloped from the bottom up and explicitly tailored as a purebred sports tool for CX fans, the new carbon variants impress with a large number of technical details. For instance, the new frame is not only outstandingly light at 1.2 kilograms*, but also has 58 N/mm bottom bracket stiffness, making it excellently equipped for forceful climbs and sprints. With 90 Nm/° in the head tube area, the newcomer offers the highest steering precision in combination with the likewise new carbon fork, supported by a 15-mm through-axle. Internal cable routing, top saddle comfort and the option of riding the new CYCLO CROSS with cantilever brakes complete the comeback.

* in frame size 56

AN OVERVIEW OF THE HIGHLIGHTS

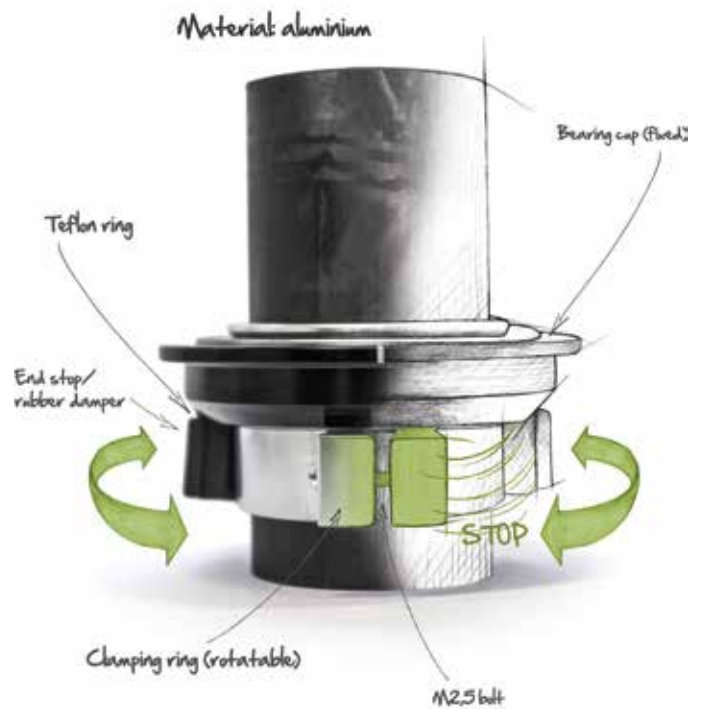

- + New carbon frame: only 1.2 kg (56)
- + Brake hose integrated into carbon fork
- + Superb steering precision
- + High bottom bracket stiffness
- + Enhanced saddle comfort
- + Also available with cantilever brakes

TECHNOLOGIES

OUR IDEAS. YOUR ADVANTAGE.

MERIDA INTERNAL BLOCK SYSTEM

With the "MERIDA Internal Blocksystem", our R&D experts have found a smart, light and completely internal solution for protecting carbon frames against damage caused by handlebar impacts (e.g. in case of a fall). The easy to install and adjust system works with a clamping ring around the fork's steerer tube. Once put into position with a bolt, it works together with blocking inserts to make sure the handlebar only turns up to a certain degree and stops just before it hits the frame.

SMART ENTRY

Internal cable routing perfected: While conventional solutions often have the drawback that cables can move inside the frame, our SMART ENTRY system actually clamps them under tension. This also makes sure that you won't be distracted by rattling noises when the trail gets rough. And because the cable inlets are completely changeable, all kinds of possible set ups are possible: Di2, hydraulic hoses, mechanical housings... First available in 2016 in the model lines ONE-TWENTY and NINETY-SIX.

NANO MATRIX CARBON

Carbon bikes are often subject to considerable strain. To increase the quality of the used material, MERIDA utilizes this premium technology: the epoxy resins are enriched with special nanoparticles to strengthen the matrix of the carbon composite. This way, the impact resistance of the final construction is increased successfully by up to 40 %. "Nano-Matrix Carbon" refines all MERIDA high-end carbon bikes of Model Year 2015.

BIO FIBER DAMPING COMPOUND

Using nature as a role model, MERIDA refines the construction of different carbon components successfully with special bio flax fibres, which impress particularly with one interesting feature: highly effective vibration damping. Like rigid carbon forks, the rear stays of road bikes or MTB hardtails turn into genuine comfort wonders when these natural fibres are woven into the per se torsion-resistant carbon matrix.

AWS – ANTI WRINKLE SYSTEM

Due to its technological characteristics, carbon provides designers and developers with many excellent possibilities in bike building usually not offered by other raw materials (e.g. aluminium). The surface structure is visually fascinating – but what does happen inside the frame? MERIDA utilizes specific mould inserts which reduce wrinkling during production considerably. Results: More stiffness and durability but less weight.

FLEX STAY

Road bikes and MTB hardtails are deliberately rigid in the rear. This way, they do not only reach low weights but also turn each rider-provided watt into propulsion. Yet a rigid rear end transmits bumps back to the rider as well – this affects the athlete's performance potential. But not in the case of our "Flex Stay" seat and chain stays: Their special design works like a flat spring to absorb surface bumps and reduce vibrations effectively.

TFS TECHNO FORMING SYSTEM

Thanks to its low weight, aluminium still holds a strong position in frame manufacturing. Innovative shapes that go beyond just round tubes can be realized by the mechanical TFS moulding process. Utilized material: Racelite 6061 aluminium.

HFS HYDRO FORMING SYSTEM

The mechanical TFS process works from the outside to the inside. In contrast, the complex Hydro Forming System shapes the frame by pushing hot oil under hydraulic high pressure from the inside to the outside. Utilized alloy: Prolite 66 aluminium.

INTERNAL CABLE

Elaborately shaped frame constructions with special inlets/outlets for internally routed brake and/or shifter cables. "Clean" in a double sense: The bike looks uncluttered while the cables are protected effectively from moisture and dirt.

CARBON FORK

Rigid carbon front fork, in case of some models realized as full-carbon version. MERIDA carbon forks delight with outstanding vibration damping as well as superb lateral stiffness. Reliable steering and braking performance in every situation.

SMOOTH WELDING

Besides top functionality, MERIDA frames also offer high visual attractiveness. A second welding process during "Smooth Welding" evens the connecting seams – an elaborate concept for a brilliant look without compromises to stability.

POST MOUNT DISC

The modern way of mounting disc brake calipers. Hassle-free alignment and easy installation made possible by "posts" at the rear dropout. Adaptable to different disc sizes thanks to the utilization of differently dimensioned adapters.

PROLITE 66 TRIPLE BUTTED ALUMINIUM

MERIDA's premium alloy is an extremely durable and light aluminium of high-end quality. Triple-buttet wall thicknesses result not only in exciting frame designs: First of all, they offer an optimum Stiffness-to-Weight (STW) ratio.

RACELITE 61 ALUMINIUM

A superbly solid and light alloy originally from the aerospace sector. MERIDA subjects this aluminium to an additional heat treatment. Thanks to double-buttet wall thicknesses, it perfectly lends itself to the production of light and stiff frames.

X-TAPER HEADTUBE

Externally butted headtube with a mighty 1.5" steering bearing at the bottom and a weight-saving 1 1/8" one at the top; installed together with a matching tapered steerer fork. Results: Superb stiffness and precise steering performance.

K-MOUNT DROP-OUT

Specifically designed brake-disc dropout for aluminium frames with integrated mounting possibility for HEBIE rear kickstands. For optimal torsion stiffness also during tough braking – a perceptible safety plus!

FLOAT LINK

This rear end construction features a “floating” shock: The lower mount moves together with the system and offers very sensitive response characteristics. In addition, engineers are able to influence transmission ratio and progression in an optimal way. In practice, a “Float Link” rear end feels like having more travel than it actually does. Finally, the omission of the shock mount in the main frame provides a clean look.

RACE LINK

This is our rear suspension which we have optimized for Cross Country oriented riding and the modern world of 1x drivetrains. It is a single-pivot with linkage system, has a super light carbon rocker (only 80 grams) and allows for light, efficient rear ends whose kinematics totally eliminate pedal-bob when set up with 25% sag. Sensitive in the beginning, with a stable platform in the middle and progressive in the end – RACE LINK works masterfully in challenging uphill and downhill.

M.O.R.E. SUSPENSION

The performance of a full-suspension MTB chassis changes with the frame size? Not at MERIDA – due to our “M.O.R.E. Suspension” (“MERIDA Optimized Ride Engineering”) technology! This single pivot and linkage system is used in MERIDA bikes with up to 120 mm travel and makes sure that the thought-through kinematics and excellent drivetrain neutrality stay constant throughout all available frame sizes.

THRU AXLE

Thru-axes at the front and/or rear wheel offer various advantages: besides their high torsional stiffness, they especially ensure easy wheel installation and also guarantee an always correct position of the brake rotor. Because in contrast to quick-release solutions, the position of the wheel is always 100 percent the same. MERIDA trusts in 12 mm thru-axes in the rear and 15 mm versions in the front.

LOCKOUT/REMOTE LOCKOUT

The suspension fork and/or the shock unit in the rear of your MERIDA bike can be locked – either by direct controls or via a “remote control” at the handlebar. Lockout mode is ideally suited for rides on smooth surfaces or powerful sprints/attacks – not only during steep uphill. When things get rougher again, the suspension can be switched on and off in a completely intuitive way via remote.

C-S POST MOUNT DISC

“Chain Stay Post Mount Disc” – this technology is the result of three findings. First, a brake mount positioned within the frame triangle optimally protects the brake from external influences. Second, the caliper is supported by the chain stay and is therefore able to distribute the occurring physical forces in an ideal way. Third, internally routed cables can reach the brake neatly from the chain stay.

VPK

MERIDA's in-house “Virtual Pivot Kinematics” suspension is a chassis with a virtual pivot point. VPK is utilized for the MTB models ONE-FORTY and ONE-SIXTY. This concept ensures that all bikes of the 145 and 160 mm travel category combine outstanding bump sensitivity with convincing drivetrain and braking neutrality in every imaginable situation.

DOUBLE STOP/ DOWN TUBE EXIT

Rear suspension often causes problems with the rear shifting cable (e.g. formation of loops, abrasion/friction, undesired shifting) which are caused by movement during compression. Thanks to a double break via special sleeves (“Double Stop”), MERIDA keeps the defined cable length constant. Due to a large cable exit in the down tube, “Down Tube Exit” additionally puts an end to awkward handling of internally routed cables.

DOUBLE CHAMBER TECHNOLOGY

Via a special reinforcement rib (such as in the full-carbon forks of road bikes), MERIDA competently combines two different technological characteristics which seem to be quite contradictory at first sight: Outstanding torsion-stiffness for maximum handling quality and safety on the one hand, a certain damping flexibility on the other. In this effective way, MERIDA forks become equally safe and comfortable.

DI2 READY

Like WorldTour pro riders, more and more technology-loving road riders trust in Shimano's electronic Di2 shifting system, which is characterized by high reliability and efficient, effort-less operability. Bikes/frames with the symbol "Di2 Ready" are optimally prepared for the installation of this technology – especially with a battery mounting possibility below the chain stay or in the seat post.

INTERNAL CLAMP

Designing high-end road bikes for a WorldTour squad is similar to the work of a Formula 1 team. You're in it for the win, and even the most inconspicuous detail can finally result in decisive split seconds being lost. So the "Internal Clamp" of our WARP TT and REACTO is much more than just a technical exercise and visual treat: Our special seat-post clamping mechanism efficiently minimizes turbulences at the top end of the seat tube and thereby saves important power.

MODULAR HEAD / MODULAR COCKPIT

With the WARP TT, the TEAM LAMPRE-MERIDA trusts in an absolute specialist. To improve the rider's position on the bike, MERIDA's very own "Modular Head" system enables the increase of the effective head-tube length via special inserts (30 resp. 60 mm). With an adjustable stem, Di2 integration, variable armrests and aero bars, the "Modular Cockpit" of the WARP TT multiplies the options for individual adaptability even more.

NACA FASTBACK PROFILE

The special "NACA Fastback" tube profiles of our WARP TT and REACTO base on the evaluation of data which were collected during comprehensive wind-tunnel tests (with and without pilot simulations). Particularly at the down-tube, seat-tube, and seat-stay sections, the drop-shaped tube designs with their cropped rear ends prove to be optimal in aerodynamic respect. This way, the essential factors of stiffness and aerodynamics can be combined ideally.

S-FLEX

Aero road bikes are always hard and unforgiving? Not so at MERIDA! Thanks to our "S-Flex" technology, the REACTO shines with a seating comfort which is outstanding in this segment. With its elastomer window, the aerodynamically optimized seat post absorbs surface bumps very effectively. In this way, "S-Flex" saves the REACTO rider's power reserves efficiently also over long cycling distances.

F-FLEX

The "F" for "fork" indicates that the fork of our comfort racer RIDE shares a technological principle with the aero racer REACTO: best possible flexibility paired with maximum performance. "S-Flex" protects the REACTO's rear end against hard impacts. In a similar way, the "F-Flex" fork of the RIDE ensures effective absorption of surface bumps. Besides comfort, this provides the pilot with extra handling safety.

FLIP FLOP HEAD

Of course, an aero bike has to offer best possible data in terms of aerodynamics. But at MERIDA, best possible adaptability ranges directly second. Because even superb wind-tunnel data can be useless if the pilot is not able to position her-/himself optimally on the bike and thereby produces an unnecessarily high air resistance. Thanks to the "Flip Flop" head for the saddle, the seating angles of our REACTO and WARP TT can be modified optimally.

FULL SUSPENSION

Full suspension bikes are technological masterpieces. Realized for the very different riding disciplines Cross Country, Trail, All Mountain und Enduro, they are optimized by our engineers each year to not only meet the highest international standards, but to set new ones. For 2016 we add a new arrow to our quiver consisting of the ONE-SIXTY, ONE-FORTY und ONE-TWENTY. The 100 mm full suspension NINETY-SIX is ready for the international Cross Country World Cup circuit.

NINETY-SIX LEGENDS DON'T JUST RETURN. THEY COME HOME.

Is it mere respect that raises the hair on your neck? Or could it be awe? No doubt about it: like hardly any other full-suspension racer, our NINETY-SIX has influenced an entire era, inspiring bike engineers and helping racers achieve peak performance since its debut in 2009. The NINETY-SIX, which was provisionally put to pasture in 2012, still ranks among the most successful racing bikes off all time. So the best bit of news for the 2016 MERIDA season is this: the legend is coming home!

No full-suspension concept is lighter, no design is sleeker, and nowhere else do power transfer and lockout control work so perfectly. These were enough reasons for the MERIDA engineers to go back to the roots after the successful years of the NINETY-NINE and BIG NINETY-NINE. While the original NINETY-SIX and its successors were designed for 3x and 2x drivetrains, the second generation NINETY-SIX has been kinematically optimized for the 1x11 drivetrain that now dominates the XC circus – thanks to “M.O.R.E.” technology, it always works perfectly right away, regardless of frame size. Our engineers followed this focus of development along with the goal of simultaneously implementing the new NINETY-SIX as 27.5” and 29er options. Thanks to the manufacturing technology with an EPS core, which is used here for the first time, the NINETY-SIX – which was developed in close cooperation with our XC pros – has a frame weight of less than 2 kg as well as continued super-high stiffness. This makes it a winner even before the race starts. Wanna bet? Not only our MULTIVAN MERIDA BIKING TEAM will leave the competition in their wake with this new working tool...

HIGHLIGHTS

- + Extra-light full carbon frame
- + Full Rock Shox chassis
- + Di2 ready
- + Original team version

ONE- TWENTY

THE QUEST FOR THE HOLY TRAIL

Even though they are justifiably called “the world’s biggest playground for mountain bikers”: you don’t have to have the Alps at your doorstep to experience maximum fun on your trail bike every day. Especially not if the bike can easily master all the challenges on the playground, from long and relaxed rides to short and playful ones. In other words, precisely the way we understand our trail-loving full-suspension ONE-TWENTY trail bike. Either the aluminum model, which has been redesigned for 2015, or the brand-new carbon model, which will be released in 2016.

Weighing just 900 g*, the main frame of the new ONE-TWENTY carbon family will be the undisputed highlight of the 2016 MERIDA range of trail bikes. Since less weight can be saved on the rear triangle of the frame using carbon, and since especially the chain stays are quite in the line of fire during serious everyday trail riding, the new CF models of the ONE-TWENTY will be hitting the trails as hybrid solutions. One thing is true for all model versions: 130 mm front forks are optimally suited to the potent “120+” mm on the “Float Link” rear in order to give the bike precisely the playful and confidence-inspiring character it has to have as a modern trail bike. As is also the case for the new NINETY-SIX, two wheel dimensions can be found for the four available frame sizes; the “big” 29er versions ride somewhat more smoothly and the 27.5 inchers are a bit more playful. The new ONE-TWENTY also shares its innovative internal cable routing with the full-suspension NINETY-SIX racer, including the possibility of installing a dropper seat post also with internal routing.

HIGHLIGHTS

- + Carbon main frame
- + Rock Shox Pike and Reverb Stealth
- + Sram X1 1x11 drivetrain
- + DT Swiss wheelset

ONE-FORTY

ALL MOUNTAIN? THAT'S A LAUGH!

Are we really serious about this bike? Well: yes and no! Our entirely serious ONE-FORTY, a deliberately and invariably fun-oriented 27.5" All Mountain bike, is a valuable addition to our full-suspension family, which takes on every uphill, every trail and every downhill with a big grin on its face.

The ONE-FORTY was just carefully modified for 2015. Improved features include slightly shorter chain stays that increase agility as well as more clearance for sturdier tires. As a result, our engineers were able to fully rely on the basic "Virtual Pivot Kinematics" full-suspension concept for the 2016 season so that they could once again devote themselves to its extremely attractive specs – no matter what kind of trim. In addition to upgrades of the suspension forks, which are held in place by a stiff "X-Taper" head tube, the preferred use of an even more reliable combination of tires is most striking: not only does a proven and powerful tire – Schwalbe's Hans Dampf – do its job both in front and in back*; "go tubeless!" is the name of the game. With the advantages of tubeless, especially in challenging AM use, all models are equipped with tubeless rims or already have a complete tubeless kit*. All the models share the use of a dropper seat post with internal cable routing, 760 mm-wide handlebars as well as 45 or 50 mm-long stems – even shorter than the 2015 model for an even more fun-oriented trail experience. The models are available with 1x or 2x drivetrains.

HIGHLIGHTS

- + Sram X01 1x11 drivetrain
- + Dropper seatpost with remote
- + Internal cable routing
- + Full tubeless kit incl. valve, sealant

ONE-SIXTY

THE STORY OF AN INFINITELY LONG DESCENT.

What makes you different from your fellow people? At least one thing: you jump for joy when someone tells you that things can only go downhill from here! You are the personification of descents and, just as you uncompromisingly roll down the trail, your bike has to have the same lack of compromise. Voilà: the 2016 ONE-SIXTY lives for the thrill of zipping down the hills. Unless you insist on going up a hill every now and then...

Only last year did our established 160 mm full-suspension receive a super-modern 27.5" update. Even more room for wider tires, a downhill-oriented cockpit and a design language that screams "enduro!" – what more could you ask for? Well, there's always a little bit more that can be done. A little bit faster, a little bit tighter around the turns, a little more supple for the rough stuff. Or a little bit more striking and with a few revised details. This is precisely how our ONE-SIXTY shows up for the new season. Without a doubt, proven technologies such as the potent "Virtual Pivot Kinetatics" chassis, the powerful "X-Taper" control head tube and technical refinements such as "Double Stop" and "Down Tube Exit" continue to be responsible for a typical MERIDA enduro experience. Adding to this experience is the new tire setup: rims prepared for use with the tubeless system or already fully equipped with a tubeless kit*, meaning that the new ONE-SIXTY flows more stable and reliably through the trails – a perfect accompaniment to the custom setup that suspension specialist Rock Shox has given the ONE-SIXTY chassis. Finally, it only makes sense that our enduro uses a 1x11 drivetrain.

HIGHLIGHTS

- + Sram X01 1x11 drivetrain
- + Internal routing for dropper post
- + Full tubeless kit incl. valve, sealant
- + Modern enduro geometry

HARDTAILS

Keep it simple? Certainly a good idea for the basic layout of a hardtail, but technologically, we like to take things a little further in order to build the most advanced bikes out there. This already counts for our entry level MATTS family, which presents itself as a gateway to the world of off-road fun, and it is most impressively realized in the World Cup proven racing variants of our BIG.SEVEN and BIG.NINE models, which show how high our engineers' demands are.

BIG.NINE

SOME
BIKES
COME.
SOME GO.
THIS ONE
REMAINS.

As an innovative brand that has played a leading role in the Mountain Bike World Cup for decades, we at MERIDA know from hard-won experience that only one thing is important in a successful racing bike: it has to make its rider fast. In its career, our BIG.NINE has had not only a large number of finishes on the winners' podiums, but has been able to hang European and World Championship gold medals around its natty head tube. So why should we change this recipe for success?

It does not matter whether it is the high-end carbon rocket, the super-sporty aluminum version or the beginner-friendly recreational model: the BIG.NINE can look back on a history nearly unparalleled in terms of success. Therefore, the modifications for the 2016 models are limited solely to characteristics of all the available BIG.NINE models – and these are worth a look. For example, an electronic shifting system can be found on an MTB for the first time in MERIDA's history. Voilà: the top-model BIG.NINE 9000 gives you a thrill with the new Shimano XTR Di2, whose excellent performance perfectly matches the ultra-light CF5 carbon fiber frame, adding to this purebred racer's spirit. Supplemented by Rock Shox' 100 mm redefinition of the RS-1 suspension fork, the 9000 is a true showcase of currently available technological highlights. And further down the model line? You can find a broader application of stiff 15 mm axles in front, tapered head tubes for excellent tracking, and internal cables; as a result, each 2016 BIG.NINE has all the genes that have made this bike one of the most successful on the World Cup circus.

HIGHLIGHTS

- + Original team version

BIG.SEVEN FROM MIDDLE GROUND RIGHT TO THE POINT.

Since the laws of physics say that force is the product of mass times acceleration, then here is the result for bikers: the lighter a bicycle is, the more quickly it can move. This is a good reason, not only for racers, to think about using a 27.5" hardtail – but certainly not the only reason. Similar to its "big brother" BIG.NINE, the BIG.SEVEN wins you over with a smooth ride, modern comfort and powerful traction. These are precisely the qualities that give the bike "in the middle" its advantages compared to the MATTS 26 inch.

Since 2014, we have positioned the BIG.SEVEN precisely between our 29er BIG.NINE hardtail and MATTS, the 26-inch classic. But it is not exactly the middle of the wheel sizes that make a 27.5" bike interesting: a diameter of 25 mm separates the BIG.SEVEN from the MATTS, and a further 38 mm from the BIG.NINE. This is precisely where advantages can be found, especially for beginners and recreational racers: since mainly the wheels determine how quick a bike can be, they should be as light as possible – it is obvious that small wheels have to be lighter than big ones. Therefore, the BIG.SEVEN really does combine the best of both worlds; it rides more smoothly than a 26 inch and has a weight advantage over a 29er. And because this concept is a real winner for the BIG.SEVEN, the changes for 2016 are limited to the equipment: first and foremost, the top-model BIG. SEVEN 9000 looks brilliant with Shimano's XTR Di2 and the RS-1 by Rock Shox. New seat posts with a 15 mm offset make the seat position of all CF and LITE models easier to ride.

MATTS

THE EASY WAY TO MAXIMUM FREEDOM.

Notwithstanding any questions about material, wheel size, or equipment: sitting on an MTB means enjoying a lot of freedom. No other type of biking is so closely linked to the enjoyment of nature, the playful handling of a bicycle or just coasting along in your leisure time. A whole lot has happened since mountain bikes came onto the global scene in the 80s, but one thing has remained constant: reliable 26-inch hardtails such as MATTS provide easy access to the world of off-road fun. Therefore, they will once again be the most popular mountain bikes in the world in the 2016 season.

Even in times of full-suspension MTBs, 29ers and 27.5 inchers, there are good reasons for many people to rely on proven concepts. For example, the "classic" beats other MTB versions in terms of its popularity, and thus inevitably in terms of its price structure and availability of accessories and replacement parts. And for everyone whose physique alone excludes riding a "big" mountain bike, 26 inchers continue to be the best choice for off-road bikes. For example, children and young people who are thinking about changing from 24 inchers find MATTS to be a reliable partner that can be further equipped with interesting specs. For instance, fenders, a side stand and/or a bike rack* can be permanently attached, turning any MATTS into a professional for school and everyday life in no time. For the 2016 models, the entire MATTS family has received new colors and graphics which seamlessly integrate it into the BIG.NINE and BIG.SEVEN ranges.

WOMEN

Differences can not only separate us, if embraced they can also bring us together. Therefore it is only logical to chose bikes which celebrate these differences. Not that our unisex models would generally be a bad choice for female riders, but just consider, if only for a moment, a bike that not only speaks to your sense of beauty but also features a specific geometry and specs to make your riding experience the best there can be? Welcome to our JULIET model line!

JULIET BACK ON THE TRAIL IN NEW SHAPE.

Brand-new for the 2016 mountain bike season, and certainly much more than “merely” ladylike, stylish and sexy: our new JULIET shines with a totally redesigned frame and offers female cyclists another noticeable shot of the “MERIDA feel-good factor”.

Its unique frame design has always been the factor that has won over mountain bike-savvy women for our JULIET series. Due to the marked swoop of the top tube, our engineers attained a lower standover height; as a result, every time the rider gets on or off, every (unplanned) stop and every maneuver in challenging terrain feels a lot better. For the 2016 JULIET season, the engineers at MERIDA have reduced this standover height even further. The result is a noticeable increase in safety and reliability, achieved by doing without a gusset, an additional support of the top tube located on the seat post. This functional modernization has a pleasant side effect: the new JULIETs look a little bit sportier. The new frame is absolutely state-of-the-art in terms of how the rear brake cables can be elegantly integrated into the frame*. As was the case in the generations before the new 2016 models, it will be possible to attach a side stand, fenders and/or a bike rack to JULIET*. This ensures that our women's MTB will continue to distinguish itself as a reliable partner in leisure time and everyday life, even when it is not being used for exercise.

HIGHLIGHTS

- + Kickstand / rack compatible
- + Air fork with lockout
- + Shimano XT-drivetrain
- + Internal cable routing

YOUTH & KIDS

So you want to follow in the footsteps – to be more precise, the tire tracks – of our MULTIVAN MERIDA pro riders José Hermida or Gunn-Rita Dahle Flesjå? Or do you simply want a trusty companion on the way to school, friends or the sports center? If you also want a bike that will get envious glances from everyone, no matter what age, a MATTS JUNIOR is the way to go. These arguments should easily be enough to also convince your parents...

MATTS JUNIOR

IT'S A
COLORFUL
WORLD.

When it comes to making decisions, some adults have a pretty hard time. Particularly in their role as parents, they weigh dozens of options, get advice on the pros and cons, and annoy their children by simply not being able to settle on a plan of action. All they have to do is listen to their kids: a bike has to be cool! The fact that safety and the price/performance ratio make sense should be obvious, shouldn't it? At least they are at MERIDA! Because we are absolutely serious about the needs of even the youngest MERIDA fans, our models for children and young people have a simple principle starting with the entry level, with its 12-inch tires: if there's something the child doesn't like, their parents won't like it either – and vice-versa.

A single glance at the new models for the coming year is enough to show how our engineers and designers have interpreted this concept for 2016: colorful! No other family of bicycles is as colorful as our MATTS JUNIOR series, which was just extensively updated in 2015. But our 12- to 24-inchers have much more to offer than some new colors. Above all, MATTS J20 and MATTS J24 bikes – each of which has a RACE version – have a certain seriousness; after all, they are different because of the way they are used and are specifically suitable for youth racing. Stiff forks for the lowest possible total weight as well as lightweight 1x drivetrains support the ambitions of your offspring to emulate their idols on our MULTIVAN MERIDA BIKING TEAM and to get an early start in the race for glory.

HIGHLIGHTS

- + Sporty geometry
- + Hydraulic disc brakes
- + Shimano 2x9 drivetrain

ROAD & FITNESS

Narrow tires are made for speed: these bikes like to go fast. From smooth tarmac to cobbled roads and gravel, from time trial to cyclo cross and commuting, these model lines are purpose-built for your individual requirements. With their low weight, impressive aerodynamics and convincing comfort values, they are marvels of engineering. What especially stands out for 2016 is our re-engineered SCULTURA, whose superb performance is bound to set new standards on the international stage.

SCULTURA TEMPTING BEAUTY WITH A NEW EDGE.

You can compare developing the new SCULTURA for 2016 to a supermodel looking into the mirror. While everybody else has trouble looking away from the sheer perfection, the beauty herself is still not satisfied. The MERIDA engineers had the same situation with our pro bike, which is used in TEAM LAMPRE-MERIDA: Stiffness? Great. Comfort? Excellent. Weight? Could be a little better. Aerodynamics? Were not yet taken into account in the previous models. So there were two important aspects that could be added to the new SCULTURA specifications.

This result of impressive engineering at the cutting edge of technology is the undisputed star in the sky of 2016 MERIDA road bikes. It is not enough that the new, top-notch frame (CF5) is one of the lightest in the world, with a sleek 750 grams*, thanks to MERIDA's pioneering manufacturing technology. Together with a fork that was also developed in-house at MERIDA, the frame kit achieves the top value of just below 1000 grams, thus providing the foundation for the SCULTURA 9000 models, whose total weight of 5.8 kg makes it one of the lightest serially-produced bikes in the world. But the new SCULTURA is much more than "just a lightweight". Despite its chain stays, which are just 400 mm long and provide great agility, you can now use 25 mm tires and increase the excellent comfort even more. Here's something else that's impressive: the aerodynamic performance of the new king of the hill. With measured values that are just below those of the proven aerodynamics expert REACTO, SCULTURA wows people with its overall characteristics, which you will have to search far and wide to match.

HIGHLIGHTS

- + Optimized aerodynamics
- + Carbon fork and seatpost
- + Brake behind the bottom bracket
- + Internal cable routing

REACTO TAKES THE AIR AND LETS YOU BREATHE.

Even though they need air to breathe, racing cyclists don't like an important aspect of this medium that surrounds us: its resistance. Oncoming air provides the greatest resistance by far, with a value of about 73%; racers need to turn the pedals quickly to overcome this in order to attain their desired speed. Blessed is the biker who does this on a MERIDA REACTO, once again one of the most aerodynamic road bikes in the world in 2016.

"Aerodynamics beat weight" was the conclusion of the internationally renowned German TOUR magazine in its comparative test of the best aerodynamic racers (TOUR 2-2015). Our TEAM LAMPRE-MERIDA has also made REACTO its standard bike; after all, every watt saved can be turned into valuable seconds and meters ahead of the competition. You will quickly realize how much the REACTO has been improved by the knowledge our engineers gained during the development of the WARP TT time-trial specialist in the laboratory and wind tunnel: striking "NACA Fastback" tubes, whose wedge-shaped tube profiles are flattened off at the rear, provide the aerodynamic basis, accompanied by direct mount brakes (the rear brake is also positioned out of sight beneath the bottom bracket), internal cables, as well as a perfectly integrated seat post that uses our "Integrated Clamp" and "Flip Flop Head" technologies. Thanks to the special "S-Flex" module, this expert bike provides a surprising amount of comfort and is uncompromisingly trimmed for speed, thus forming an overall concept that will take your breath away – but only proverbially.

HIGHLIGHTS

- + Original team version
- + Comfortable S-Flex seat post
- + Variable seat tube angle
- + Internal cable routing

RIDE THE LONGER YOU RIDE, THE MORE YOU'LL WANT ONE

The more time you spend on a bike, the better – recreational and hobby cyclists would certainly agree with this simple principle. But the following is also true with increasing ambition: the longer you ride, the more important comfort becomes. The fact that even the hard-nosed professionals of our TEAM LAMPRE-MERIDA put their trust in the special concept of our RIDE family with this knowledge in mind, such as during races over cobblestones, says a lot about these reliable properties.

Due to its geometry, which is trimmed specifically for comfort, and suitable specifications such as the perfect (optional) integration of fenders, both the carbon-fiber and aluminum models of the RIDE have been winning people over even before they were revised for 2013. For example, the combination of a shorter top tube and a somewhat longer head tube (compared to the REACTO and the SCULTURA) result in a noticeably more relaxed riding position. Furthermore, the specialized profile of the seat stays, which are located far down on the seat tube, ensure that the seat is very comfortable; this is perfectly supplemented by the excellent damping of the 27.2 mm seat post. The 25 mm wide tires (tires up to 28 mm can be installed as an option*) not only increase the vibration damping of any bumps in the road, but also provide significantly higher grip, thus increasing safety. The same is true for the carbon and aluminum models of the RIDE DISC family, which – acting as a modern disc brake version of the comfortable classic – has not only the same geometry, but also features that will win you over, such as its internal cables*.

HIGHLIGHTS

- + Excellent comfort
- + Vibration damping by flax fibre
- + compatible with 28 mm tires
- + Fender mounts

WARP IT'S ALL JUST A MATTER OF TIME.

Triathletes and time trialists have something in common: time and time again, they are faced with the task of gaining a few seconds against the ceaseless ticking of the clock. However, their demands for what would be the bike best suited for them differ in one important detail: the rules of the Union Cycliste Internationale (UCI).

While triathletes have to accept clear guidelines (depending on the competition), such as those regarding drafting, the design of their bikes is not subject to rules that are as strict as those for time trials. For example, there is a "3:1 rule", which specifies the length and width ratios of individual bicycle parts. Complying with these strict UCI rules, MERIDA engineers built a time trial bike for the professionals in our TEAM LAMPRE-MERIDA that leaves no questions unanswered. Special tube profiles (optimized in the wind tunnel) of the super-stiff "Nano Matrix" carbon frame, the innovative seat post that uses "Flip Flop Head" technology, internal cables, as well as direct mount brakes and a fork with extra-trim fork blades (making it independent of the air coming from the front wheel) all lower air resistance that the rider can optimally implement thanks to the control center (patent pending). With more than 1000 possible adjustments, the combination of our "Modular Head" and "Modular Cockpit" technologies ensures a perfect fit of the bicycle to the position of every single athlete. What do triathletes get from all of this? The WARP TRI, which puts all this knowledge to optimum use for triathlons, such as an adjusted seat angle, an extended head tube and significantly increased practicality.

HIGHLIGHTS

- + Geometry for time trial
- + Maximum variability
- + Conformal for UCI races
- + For a fully individual build up

SPEEDER WHO SAYS THE WORLD CAN'T BE FLAT?

The world is flat – at least for fans of the MERIDA SPEEDER. Why not? High speed, zippiness and agility on narrow, smoothly rolling tires is not reserved only for those who want to conquer the road with drop handlebars in their hands.

"A true road bike with straight handlebars" – each bicycle in the 2016 SPEEDER family is nothing more and nothing less. It doesn't matter if the bicycle has a heart of ultra-light carbon fiber or is built of lightweight and robust aluminum: anyone who says the word "SPEEDER" is thinking of fun paired with speed and practicality that is higher than that of usual road bikes. In addition to the proven aluminum versions, with their downright suitability for daily commutes to the office, extensive training sessions, or relaxing leisure trips, the carbon versions starting with the 2016 models are even more sporty. They share their stiff but extremely comfortable frame with the brand-new CYCLO CROSS and rely on its strengths: disc brakes and a 15 mm through axle on the 100% carbon fork (which is also new) ensure maximum precision while braking and maneuvering; furthermore, due to its 12 mm through axle, the rear wheel is wonderfully simple and is perfectly positioned with the rear disc brakes at all times. Internal cables*, 28 mm wide tires with moderate profiles and the possibility of attaching fenders, a side stand, and/or a bike rack* mark the SPEEDER as an overall concept that knows better than any other how to make everyday life extremely sporty.

HIGHLIGHTS

- + Through axles front and rear
- + Carbon fork
- + Di2 ready
- + Internal cables frame and fork

CYCLO CROSS

A PERFECT OPTION FOR CROSSWISE THINKERS.

"Cross is boss!" The fans of this unique sport have been following this motto for a long time now. With several new CYCLO CROSS models for 2016, MERIDA is very happy to associate itself with this motto, which fits with our slogan "MORE BIKE". This includes a completely new carbon version that gives not only recreational bikers maximum speed, but also serves even ambitious athletes perfectly.

While the focus of our CYCLO CROSS model family was on very sporty, yet robust and highly practical aluminum bikes for the 2014 and 2015 models, these highly sporty training and commuter versions are now being supplemented by carbon fiber "rockets". A completely new development that is optimally coordinated to the challenges of modern Cyclocross, the new carbon version – naturally with state-of-the-art disc brake technology – is rolling into the shops. To integrate the braking forces (which, compared with caliper brakes, occur on only one side) perfectly into the system, the frame and the fork have been designed from scratch. This resulted in superior stiffness for hard-hitting power transfer, a very comfortable seat thanks to thin seat stays and a 27.2 mm post, as well as braking and steering precision that fully satisfies the superior maneuverability and speed of this racer. Thanks to internal cables, a 15 or 12 mm through axle in the front and back, respectively, as well as the option of permanently attaching fenders, the carbon-fiber "new kid on the block" retains the mixture of superb sportiness and practicality that is typical for MERIDA. Perfect for racers: the Sram 1x11 drivetrain on the top 9000 model.

HIGHLIGHTS

- + Through axles front / rear
- + Internal cable routing
- + Fender mounts
- + Conformal for UCI races

TREKKING & CITY

There is hardly any area of life that can not somehow be improved by the use of a bicycle. Your way to work by car is getting tedious? Get out of the traffic jam! Your leisure time is precious to you? Make it count! You want to show up at your favorite café in style? Well, get there on a MERIDA! Our CROSSWAY and CROSSWAY URBAN model lines are made to enrich your life in every way. Let the 2016 season be one that introduces you to the "MERIDA-factor".

CROSSWAY

THE BEST PLACE TO SPEND YOUR LEISURE TIME.

Who doesn't want to actively design their leisure time without having to plan it in a big way? Simply spending a few hours away from all your obligations and duties, doing what you like best: sitting on a bicycle and letting the fresh air blow in your face far away from the hustle and bustle of the city... For everyone who does not let their bike dictate where they like to go, MERIDA provides the CROSSWAY family, the perfect all-rounder for many occasions.

For a long time now, not only the name CROSSWAY has stood for a literal cross of many positive qualities. Above all, the practical, robustly designed, yet lightweight aluminum frame plays an important role in the recreational character of the CROSSWAY. And the 2016 models have received a significant upgrade: thanks to the new, restyled top tube and the new head tube, all CROSSWAY models not only look even better, but it was also possible to increase the stiffness of the head tube, and thus the precision of braking and steering. As a result, the heart of your versatile travelling partner beats even more stronger and has equipment that is more than merely adequate: thanks to its suspension fork and moderately profiled, smoothly turning tires, the CROSSWAY makes use of its trailblazing qualities chiefly on unpaved roads, yet provides maximum comfort and safety at all times. Since fenders, a side stand, and/or a bike rack can be attached*, the 2016 CROSSWAY fears neither its role as a daily driver nor adverse weather conditions.

HIGHLIGHTS

- + Kickstand / rack compatible
- + Rock Shox Paragon fork
- + Down tube with cable protection
- + Shimano XT components

CROSSWAY URBAN YESTERDAY, TODAY WAS STILL TOMORROW.

As an innovative brand that has always had a significant influence on the world of cycling, MERIDA is certainly the exact opposite of what is popularly known as “always living in the past”. But there is one thing we can’t help feeling when looking at the urban landscape: retro is en vogue! Therefore, all friends of vintage trends can look forward to a suitable MERIDA counterpart on two wheels in the 2016 models: the CROSSWAY URBAN.

The most striking feature of all the brand-new CROSSWAY URBAN models is their noticeable reduction to the basics on the outside. All models are equipped with a derailleur that significantly facilitates everyday riding and employ super-modern technologies such as disc brakes, but all of these convenient features are “hidden” beneath its vintage appearance. As a result, the CROSSWAY URBAN is the ideal companion for everyone who has decided to forgo the annoying and time-consuming daily commute in a car, as well as the hassle of finding a parking space, and who recognize that there are a lot more reasons to spend time on a bicycle rather than off it. Bikes that are deliberately designed for everyday use have several obvious intelligent details: threaded axles and a seat clamp without quick release provide reliable theft protection, and the stiff carbon fork* as well as the internally routed cables are evidence of an exciting combination of yesterday and tomorrow that modern urban cyclists can already indulge in today.

HIGHLIGHTS

- + Stainless steel hardware
- + Carbon fork
- + Fast rolling, reflective tires
- + No quick releases – against theft

MULTIVAN MERIDA BIKING TEAM

MTB RACING

Gunn-Rita Dahle Flesjå, José Hermida, Ondrej Cink, Thomas Litscher and Julian Schelb; Norway, Spain, Czech Republic, Switzerland and Germany; Nove Mesto, Albstadt, Lenzerheide, Mont-Sainte-Anne, Windham and Val di Sole: five nationalities, six races – one team.* Already in its 14th year, our MULTIVAN MERIDA BIKING TEAM is presenting itself livelier and more ambitious than ever for the 2015 season. The XC traveling circus knows no other team that similarly resembles a family to such an extent. With this exceptional energy in the squad, the line of approach is clear: the MULTIVAN MERIDA BIKING TEAM (MMBT) is hungry for successes again! Ondrej Cink's and Gunn-Rita Dahle Flesjå's latest national champion titles as well as the by now 10th world championship title of Gunn-Rita, the "queen of mountain biking", leave no doubts.

"It's like in 'real life'", explains MMBT manager Fabian Aust. "First you learn, then you apply what you've learned and then you pass it on – our team works just like that." The fact that two experienced pros – Gunn-Rita Dahle Flesjå (42) and José Hermida (37) are even icons of the sport – have taken over the role of facilitators is surely not the worst thing that could happen to the other three pro riders. The two "old hands" bring along Olympic gold, numerous World and European Championship titles as well as countless national medals. And their

countless valuable tips for mastering world cup life on and off the trails also meet already experienced recipients too: Thomas Litscher (26) was U23 World Champion in 2011, Ondrej Cink (25) in the following year, and at age 20 Julian Schelb even secured the silver medal at the U23 World Championships in 2013. These are fantastic prerequisites for our MULTIVAN MERIDA BIKING TEAM to retain their place among the leaders.

Five characters, six races and one common goal above all which also unites them in the saddle: to also ride the brand-new NINETY-SIX full suspension racer from podium to podium around the globe. Isn't that a great family activity?

MORE SUCCESS. MORE BIKE.

*as of July 2015

GUNN- RITA DAHLE FLESJÅ

MULTIVAN MERIDA BIKING TEAM

There are athletes, and then there are successful athletes. Some dominate competitions, while others characterize an entire era. Every sport has its protagonists who not only impress their competition with their powerful will to succeed, but who cast a spell over the spectators as well. These are the heroes and heroines of their sport.

Gunn-Rita Dahle Flesjå is just such a heroine. Since the Norwegian cyclist, now 42, first took up the sport of mountain biking almost exactly 20 years ago, she has left her mark on the disciplines of cross country and marathon racing like no other before her, and as no one is likely to do in the foreseeable future. With a total of 10 world championship titles and an impressive 29 world cup victories since July 4, 2015, Gunn-Rita Dahle Flesjå is the most successful mountain biker of all time. Hard to believe, but true: this likable athlete has scored each and every one of what is an incredible number of additions to her trophy case on a MERIDA. Practically nowhere else in the world of cycling will you find a similar symbiosis of athlete and sports equipment.

"Since I started racing, I have pursued clear goals", said Gunn-Rita Dahle Flesjå, admitting that she is decidedly ambitious. How else can you explain such a successful career, during which the then 36 year old athlete even allowed herself a break in March 2009 for maternity leave?

And yet: "10 world championship titles and 29 world cup victories – I would never have dreamed!" You could almost forget that, in addition to these victories, even more gold, silver and bronze medals await the Norwegian athlete whenever she returns from a race somewhere in the world to her home in Stavanger, where she lives with her trainer and husband, Kenneth. Not only can numerous national championships be found among these medals, but a shiny, embossed owl from Greece as well: After her Olympic debut in Atlanta in 1996, Gunn-Rita Dahle Flesjå won an Olympic gold medal in Athens in 2004. She has stood at the starting line at the world games a total of four times. Still, the ambitious elite cyclist is not yet finished racking up this statistic:

"The next major goal is waiting for me in Rio in 2016", said the MULTIVAN MERIDA icon. And why not? She will only be 43...

"I don't owe my success to perfect working material alone. Without my entire team, which has looked after me for years, things might have been very different. My thanks go out to them too."

GUNN-RITA DAHLE FLESJÅ, cross country and marathon racing legend

TEAM LAMPRE MERIDA

ROAD RACING

After MERIDA had limited itself to sponsoring the MTB pros of the MULTIVAN MERIDA BIKING TEAM for more than a decade, it was time to create a second mainstay on the road for the 2013 bike racing season. A collaboration with the Italian traditional Lampre team arose which then resulted in the formation of TEAM LAMPRE-MERIDA. After the first two years, each with increasing success, the UCI World-Tour team presented itself under the MERIDA flag at the start of the 2015 season in a form that is more than satisfying: various top 5 rankings – such as Niccolo Bonifazio at Milan-San Remo or Rui Costa at the Amstel Gold Race – were good reason to be confident! This confidence in the team was rewarded with overall victories at the Tour of Oman (Raffael Valls) and the Tour of Turkey (Kristijan Durasek) as well as the one-day-races Trofeo Laigueglia (Davide Cimolai) and GP Lugano (Niccolo Bonifazio). Four stage wins at the “home race” Giro d’Italia (two times Diego Ulissi plus Sacha Modolo and Jan Polanc) and one more at the Tour de France (Ruben Plaza) let MERIDA fans cheer during the summer.

“All the experience which the team has been able to gain through the unprecedented long and intensive commitment of their main sponsor Lampre fits excellently with the decades of experience which MERIDA has been able to contribute to this new relationship as a bike manufacturer”, says Andreas

Rottler, MERIDA's Director of Sport Marketing. He is delighted about the partnership. In addition to the intensively prepared achievements of individual riders as well as the team in interaction, Rottler particularly mentions the material, which is optimized down to the last fiber in the German MERIDA development center, as the basis of these successes. “What particularly distinguishes MERIDA is the technology transfer within the working tools used by our pros”. For instance, the new SCULTURA – presented as a specialized climbing bike for the coming season – benefits from wind tunnel findings derived from the WARP TT time trial bike. After all, one of our credos is:

MORE INNOVATION. MORE BIKE.

JOIN THE CONVERSATION

Not only World Champions like Rui Costa give interesting insights into their racing routine and everyday life – thus it is worth “listening” closely to the complete TEAM LAMPRE-MERIDA:

twitter.com/MeridaProRoadRacing

www.facebook.com/MeridaRoadRacing

www.youtube.com/MeridaDeutschland

„With the brand new SCULTURA, TEAM LAMPRE-MERIDA has a new working tool at hand that will again underline the extraordinary strength of our impressive squad especially when it comes to the challenges of mountain stages.“

ANDREAS ROTTLER, Director of Sport Marketing

www.teamlampremerida.com

MERIDA ADVENTURE TEAM

GRAVITY/ENDURO/TRIAL/4X

They are the “Magnificent Five” of the MERIDA team riders and are absolute experts in savoring the fun of cycling with professional seriousness: Tanja Hendrysiak (Germany), Hannes Klausner, Dominik Raab, Clemens Kaudela (Austria) and Alban Aubert (Switzerland) professionally shred the trails of this world! As a team or on their own, they regularly provide MERIDA fans around the world with breathtaking videos and photos which only allow for a single thought: I want to do that too! Now! Right there!

With his “Exploring the Unknown” project last year, Hannes Klausner, the passionate Austrian MERIDA Gravity rider who also does skydiving and wingsuit flying, did a trip which he himself counts as one of the most impressive of his career. “For me, being on the Cape Verde Islands meant much more than just having unknown trails to discover. It is much more the people and their stories which I will never forget,” Hannes summarizes his adventure. And that’s exactly how the idea behind the entire MERIDA GRAVITY TEAM can be described: with 77 distribution countries, MERIDA spans practically the whole world and thus lives in hundreds of different cycling universes – with their completely different people, convictions and ideas of life.

Against this backdrop it becomes clear why the team has been on the road almost unchanged

© www.christophbreiner.at (1)

for MERIDA for more than 15 years: it’s not about simple promotion, it’s about pure fascination for everyone involved. Alban Aubert is 43 years old now – and a teacher in “real life”. But that didn’t stop the amiable Frenchman from going on a multi-week adventure trip to Korea with his teammate Hannes Klausner. The same goes for Dominik Raab: at 18 years old the Austrian became national trials champion. And today, twelve years later? Along with the idol of the scene, Danny MacAskill, he is one of the best bicycle artists in the world. Or Tanja Hendrysiak: the winner of the 2012 European 4X Cup is not only one of the most photographed female faces in the bike scene and thus accordingly also broadcasts the message with her cheerful, fundamentally positive manner that cycling with MERIDA is:

MORE FUN. MORE BIKE.

„For over 15 years, MERIDA Gravity riders like Hannes Klausner, Dominik Raab, Clemens Kaudela, Alban Aubert and Tanja Hendrysiak have stood for the continual enjoyment of taking our bikes beyond the most extreme limits.“

SIMON OPPOLD, Head of Marketing MERIDA

MERIDA BIKEWEAR

2016

MORE PASSION! There is no doubt that our passion does not end with the bike. For 2016, we at MERIDA have again launched an exciting clothing line which shows already upon first sight how much we like to show our passion to the outside world.

Among this extensive range with maximally sporty bib shorts and matching jerseys (short and long-sleeved) and stylish baggy cycling shorts and loose fitting jerseys for all mountain or enduro mountain bikers, there is something for every MERIDA-rider. Naturally, we demand the same high standards for material and quality like we do with our bikes: MERIDA stands for quality. Super functional fabrics are processed with utmost care and knowledge, because comfort and performance can only be united that way. Whichever bike you chose, show everyone who you are.

MORE STYLE. MORE BIKE.

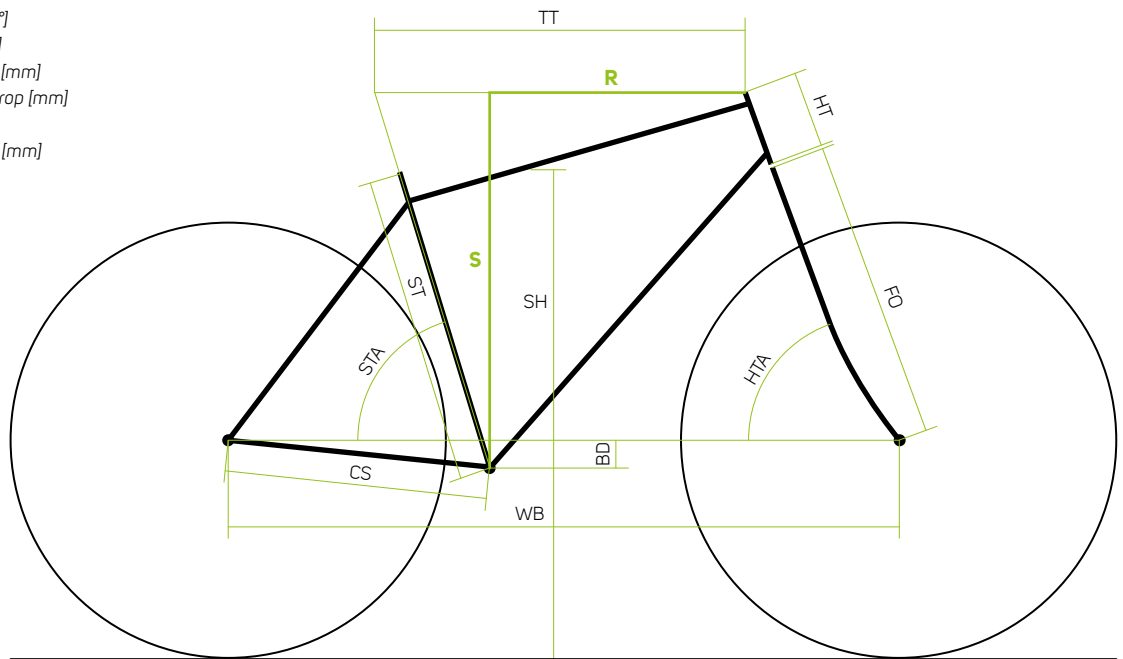

GEOMETRIES 2016

STACK & REACH To achieve a better and successful comparison between the frame data of different bikes, the measurement has been defined by means of "stack and reach". This precise approach is especially effective for enabling comparison between sloped frame designs (with increased top tube slope or e. g. lady versions) and "classic" variants – because the top tube's gradient is completely ignored as a reference parameter. To define a frame's stack and reach mathematically, bottom bracket and headtube are utilized as fixed measuring points: From the intersection of two geometric lines (one running vertically and directly through the bottom bracket's center, the other horizontally and directly along the headtube's upper edge), the reach is measured horizontally while the stack runs in vertical direction. The quotient of stack divided by reach enables effective comparison and allows conclusions with regard to the bike's individual characteristic as well.
